**SAFETY-RELATED COMPONENT WARNING!!**

COMPONENTS IDENTIFIED BY MARK  $\Delta$  OR DOTTED LINE WITH MARK  $\Delta$  ON THE SCHEMATIC DIAGRAMS AND IN THE PARTS LIST ARE CRITICAL TO SAFE OPERATION. REPLACE THESE COMPONENTS WITH SONY PARTS WHOSE PART NUMBERS APPEAR AS SHOWN IN THIS MANUAL OR IN SUPPLEMENTS PUBLISHED BY SONY.

**PRECAUTIONS FOR INSPECTIONS AND REPAIR WITH POWER OFF**

Before beginning repair work after turning OFF the main switch, be sure to first remove CN932 (EH8P) of the power board. When assembling the equipment, be sure to plug this connector last.

This is because, even with the main switch turned OFF, electric charges still remain in the smoothing capacitor in the Power board. Therefore, if another flexible board is inserted or removed, a terminal of the power supply may short an adjacent terminal while destroying the device.

instruction manual.

## SECTION 1

### GENERAL

## Overview of the Digital Audio Tape Deck

### Serial copy management system

This unit utilizes the serial copy management system that permits digital-to-digital recording for one generation. You can record CD sound or other digital formats through a digital-to-digital connection. (See page 36.)

### Three sampling frequencies

Recording/playback can be done with three sampling frequencies (48 kHz, 44.1 kHz and 32 kHz).

- 48 kHz: For analog and digital input signals in a standard mode.
- 44.1 kHz: For compact disc and pre-recorded DAT tape.
- 32 kHz: For analog input signals in a long-play mode.

### Long play mode

This unit can operate in a long-play mode. Analog input signals can be recorded or playback for up to four consecutive hours when the DT-120 DAT cassette tape is used. The sampling frequency will be 32 kHz in the long play mode.

### Visible cassette loading

You can view the tape operation through the lid of the cassette compartment. Due to a revolutionary new transport mechanism, cassette loading time has been significantly reduced.

### Excellent sound quality

- **1-bit A/D converter**

For the A/D converter section which converts analog input signals to digital signals, the unit employs a 1-bit A/D converter which theoretically generates no zero-cross distortion for a clear, elegant sound quality.

- **Pulse D/A converter**

Superior playback performance is achieved with a 1-bit D/A converter.

### Rich variety of subcode information

This unit can record subcode information such as Start IDs, program numbers, Skip IDs, and absolute time data, enabling you to quickly locate tunes and display the playback time in the same manner as when playing compact discs.

### Post edit recording of sub codes

You can record or rewrite the following sub codes after the audio signal recording has been completed.

Start ID: Signifies the beginning of a selection.

Program number: Gives a number to the selection.

Skip ID: Signifies the beginning of a portion to be skipped.

End ID: Signifies the end position of recording/playback.

Since sub codes are written on the tape separately from audio signals, the audio signals are not affected.

### Notes on connection

- Use the connecting cords specified in the illustrations.
- Turn off the power for all equipments before making connections.
- Be sure to insert the plugs firmly into the jacks. Loose connections may cause hum and noise. When unplugging, grasp the plug and not the cord.

### Notes on the optical cable

- Do not bend the cord. When the cord is not used, curl it with a diameter of more than 15 cm (5 7/8 inches).
- Do not use it under high temperatures.
- When the optical cable is not connected, cover the OPTICAL IN/OUT jacks with the supplied caps.

### Note on sound signals

When connecting an optical cable to the DIGITAL IN/DIGITAL OUT jacks, sound signals (L/R) are transmitted together through the cable.

### Connecting Cords

There are following three types of connecting jacks at the rear of the deck. Each type of jack requires a different type of connecting cord.

TY-7111 (8-909-812-00)	.....	Level
TY-7252 (8-909-822-00)	.....	Tracking
TY-7551 (8-909-814-00)	.....	Functions
TY-30B (8-892-358-00)	.....	Blank
3. Use the following torque meter:  
TW-7131 (8-909-708-71) ..... FWD
4. Switches and controls should be set as follows unless otherwise specified.
 

TIMER switch	: OFF
REC MODE switch	: LONG
INPUT switch	: COAXIAL
REC LEVEL control	: Min.
PHONES LEVEL control	: Min.
5. Cleaning of the Revolving Drum
  - (1) Fold a chamois (2-034-697-00) or a knit cloth into 4 or more files, slightly impregnate it with a cleaning liquid (9-919-573-00), and softly touch the drum with it and manually rotate the drum slowly counterclockwise by 2 to 3 turns for cleaning.
  - (2) At that time, be careful not to move the chamois vertically to the head tip. Otherwise, the head tip may probably be damaged.
6. Be careful not to move RV1 and RV2 on the RF AMP board in the mechanism assembly.
7. To adjust the tape path and guides, remove the holder assembly as shown in the diagram and use the DAT holder jig (J-8000-002-A). This will make it easier to perform adjustments.
  - First turning the pulley counterclockwise to put it in loading out status will make removal and reattachment of the holder assembly easier.
  - To perform adjustments, turn the pulley clockwise to put it in loading in status, load the cassette tape and set the IN switch to the ON position.

- (2) Open the lid and cut the tape.

- (3) Turn the hubs until the tape is completely inside the cassette (both T and S sides).  
The end sensor cassette for end sensor adjustment is now ready for use.

8. Test mode
 

The test mode is effected by shorting TP (XTEST MAIN, XTEST SERVO and XTEST DISP) on the main board and the control switch board and GND.

  - (1) Test mode (main + servo)
 

Turn OFF the power switch, connect XTEST MAIN and XTEST SERVO on the main board to GND and perform the following adjustments.

    - Tape path fine adjustment
    - DPG adjustment
    - ATF pilot (GCA) checking
    - End sensor checking
    - FWD torque checking
    - FWD back tension checking and adjustment
  - (2) Test mode (display)
 

You can check the following FL display tube and the panel switch by turning OFF the power switch, disconnecting CN932 on the power board, removing flexible board CN752 on the control switch board, connecting XTEST DISP to GND, connecting CN932 again and then turning ON the power switch.

- 10 -

Each grid of the FL display tube sequentially lights up while all tubes being lighted up finally.

↓  
Level meters go out one after one.

↓  
Press any of the remote controller for DAT in this state. Thus, all level meters go out. (It may sometimes occur that one or two meters remain lighting up according to switch setting at that time.)

↓  
Everytime a switch on the panel is pressed, display tubes light up sequentially one after one. With all keys once pressed, all level meters go out.

- To reset the test mode, disconnect the wire shorting XTEST and GND. After completion of adjusting, be sure to reset the test mode.

(Hold the  $\ll$  and  $\gg$  keys down for more than 1 second to perform rough adjustment. Hold them down for approximately 0.2 seconds for fine adjustment.)

#### ATF Pilot (GCA) Check

Perform this adjustment after cleaning the heads with a cleaning cassette.

#### Check Procedure:

- Connect oscilloscope CH-1 to TP (GCA: Gain Control Amp.) and CH-2 to TP (SWP) on the main board. (When the CH-2 signal is inverted, the trailing edge can be used for synchronization.)
- Put the set into the test mode (main + servo) and load test tape TY-7111 (8-909-812-00).

- Actuate the PLAY ( $\gg$ ) mode and check that the GCA waveform on the oscilloscope is as follows.

\* Slightly changes depending on the state of the head. NG if the GCA waveform is 1V or more or equal to the GND level.
